Subject: Microsoft Settlement

Clearly this settlement should be accomplished. Enough already of the competitive "whiners" trying to weaken Microsoft. In a free market the fit find a way to survive and prosper. The Microsoft technology has done more good than bad for this country. Tradeoffs exist in all facets of the business environment. Darwinism occurs. Microsoft should be viewed for their positive contributions to our country and society and should not be "punished" excessively because they did not always in the best interest of their competition.
